

ABSTRACT OF THE DISCLOSURE

In a method of designing a product with the aid of a computer, design-related requirement information is registered and stored in a server as an electronic
5 file created in a predetermined format, and design specifications of the product is also stored in the server. The server automatically retrieves requirement information relating to the design specifications, from the design-related requirement information stored in the server, and the content of the automatically
10 retrieved requirement information is presented to a designer via the server. The designer then creates detailed design information based on the design specifications, while checking the content of the requirement information presented.
